

### e-Business Manager Insight

Continuing the Update Shopping Cart discussion from last month, we move on to the Business-To-Business version of the shopping cart. If you read last months eBM Insight, you will remember we created an Update button on the first shopping cart page that updates the pricing based on user input. Read last months eBM Insight on-line at <http://www.4eBM.com>.

This enhancement is written in ProvideX because the price calculation includes the quantity breaks, which are not available on the rendered HTML page.

On the Submit\_SO.HTM template, we are going to add a button and a javascript function to execute our new program. These are the same functions we added for the Business-To-Consumer shopping cart, but the ProvideX routines run a little differently.

Right above the comment "`<!-- Standard Footer Menu -->`".add the following code to our template:

```
<tr>
  <td align=right>
    <input type=button value="Update Cart" onclick="shoppingCartUpdate();">
  </td>
</tr>
```

The "shoppingCartUpdate()" function needs to be added to the template as well. Insert the following function between the "script" tags. I added my function just above the `// -->` line.

```
function shoppingCartUpdate() {
  document.ShoppingCart.action =
"~~%TemplateSvc'StandardPrefix$~~IW_058scUpdate.PVX?;orderUpdate";
  document.ShoppingCart.submit();
}
```

There are only two lines in the function, and they both start with "document". The first line looks like it should be entered as two separate lines, but it should be typed in as one long line.

The last step is to copy the program "IW\_058orderUpdate" to your webEng\IW directory. Until September 1<sup>st</sup> of 2009 this program can be downloaded for free at:

<http://www.4ebm.com/mas90/eBusinessManager/FAQs/default.asp#link19>

After that you will find the program for sale in the Enhancements section of the site.

Note: This enhancement is for Sage e-Business Manager Order (B2B) in the new Business Framework.
